Skills

- HTML5
- CSS3
- JavaScript (ES6+)
- Git and GitHub
- NPM
- RESTful APIs

Projects

1. MyWordInfo

- A simple web app built from scratch using HTML, CSS and vanilla JavaScript, WordsAPI RESTful API and the Wordnik Restful API that quickly finds the different meanings of words.
- Users enter the search term, and are offered a list of the various definitions of the word they searched for.
- To get more information about a definition on the list, the user simply clicks it and more information such as synonyms, examples, part of speech, pronunciation is shown.
- There is also audio icon provided that a user a user can click to hear how the searched word is pronounced.
- Each day the app also shows the word of the day, where the word is derived from, its full meaning and some examples.

2. ComicStats

- A web app built from scratch using SuperHero RESTful API, HTML, CSS, and vanilla JavaScript that provides superheroes and villains information such as biography, appearance, powerstats and connections.
- Users enter the name of the comic character they are looking for and the related character names are shown.
- They can click any of the names and an image and description of the character is displayed. The app also displays random quotes of various comic superheroes and villains.
