Skills

- HTML5
- CSS3
- JavaScript (ES6+)
- Vue.js
- Git and GitHub
- RESTful APIs
- Webpack
- Babel
- NPM

Projects

1. BeatBoredom

See Live

- A web app that I built using Vue.js during the Corona Virus pandemic for my family to find various activities that they can do during the lockdown.
- The app uses the Bored API to display random activities of various types.
- Users can also search for particular types of activities.

2. MyWordInfo

See Live

- A simple web app built from scratch using HTML, CSS and vanilla JavaScript, WordsAPI RESTful API and the Wordnik Restful API that quickly finds the different meanings of words.
- Users enter the search term, and are offered a list of the various definitions of the word they searched for.

3. ComicStats

See Live

- A web app built from scratch using SuperHero RESTful API, HTML, CSS, and vanilla JavaScript that provides superheroes and villains information such as biography, appearance, powerstats and connections.
- Users enter the name of the comic character they are looking for and the related
